# Centralised configuration management with Spring cloud config

---

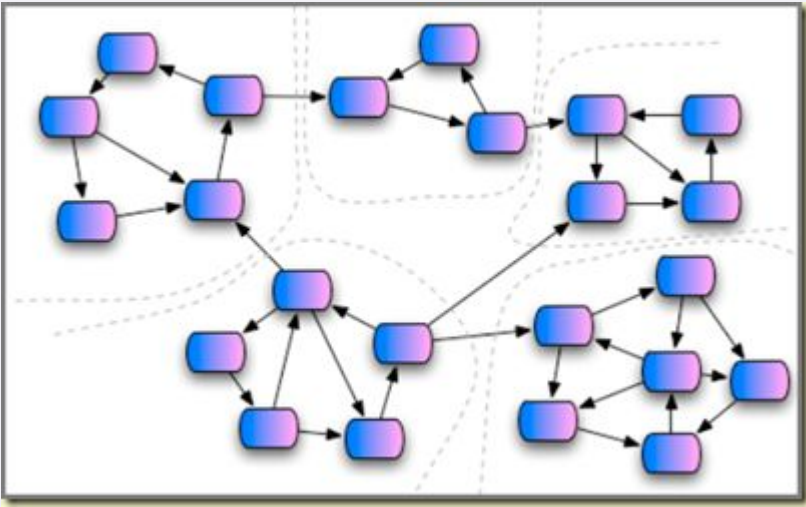

Team  
Clairvoyant India Pvt. Ltd.

**CLAIRVOYANT**

# Agenda

# Introduction

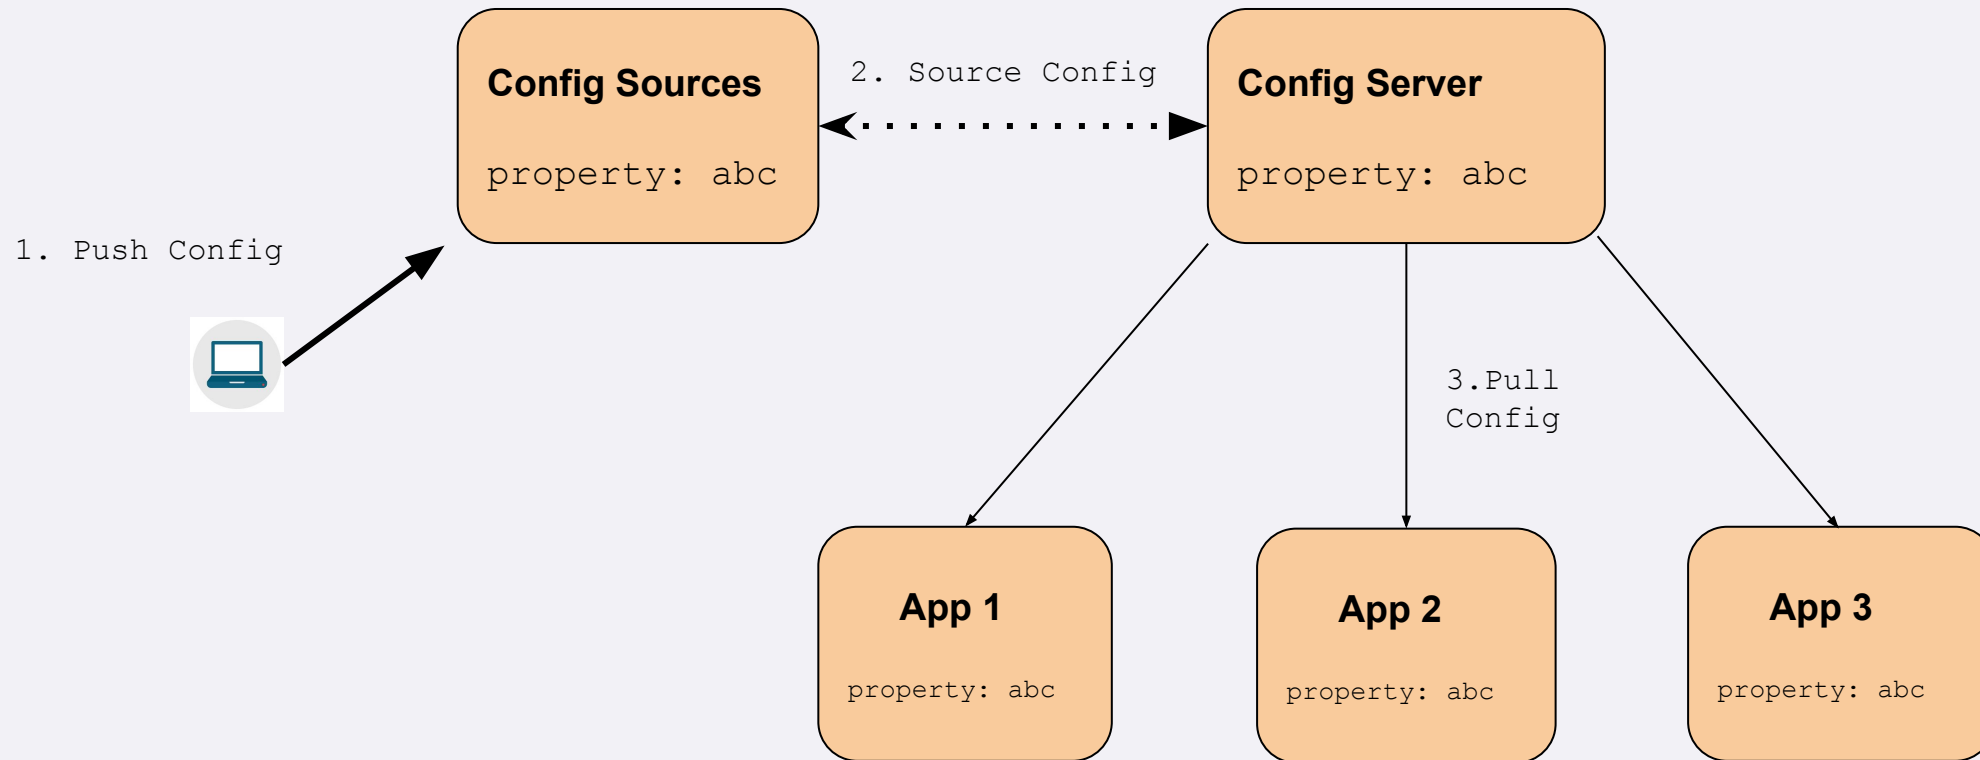

## *The Problem*

# The Problem

- Changes to an application's configuration require restarts
- There is no traceability: how do we determine what changes were introduced into production and, if necessary, roll back?
- Configuration is de-centralized and it's not immediately apparent where to go to change what.
- Sometimes configuration values should be encrypted and decrypted for security. There is no out-of-the-box support for this.

# What is it?

# The Configuration Sources

- It contains one or more configuration files that can be used by one or more applications.
- Each file is applied to an application and can be applied to a specific *profile* and / or *label*.

# The Config Server

Spring Cloud Config Server features:

- HTTP, resource-based API for external configuration (name-value pairs, or equivalent YAML content)
- Encrypt and decrypt property values (symmetric or asymmetric)
- Embeddable easily in a Spring Boot application using `@EnableConfigServer`

# The Config Client

- Bind to the Config Server and initialize Spring `Environment` with remote property sources
- Encrypt and decrypt property values (symmetric or asymmetric)

# Benefits

- We no longer require to restart the application.
- We can track the configuration changes and roll back if needed.
- Configuration is centralized and so we know where to go and change.
- We can encrypt sensitive data

# About Clairvoyant

Clairvoyant is an **innovative company** that is helping businesses redefine their operations and decision making processes by changing their business data into actionable outcomes. Through innovative products and services, Clairvoyant facilitates the journey to **cloud computing** in a cost-effective and **agile manner**. We provide best-in-class services and solutions that leverage **Big Data** and continually meet and exceed client expectations. Our **deep vertical knowledge** helps support purpose-built solutions to meet our client's unique business requirements.

## Our Services

**Big Data and Analytics**  
**Managed Services**  
**Enterprise Development**  
**Design Studio**
